

Lady Lux Mounting

This Remedy will help retighten the base of your faucet

- 1) From under the sink, remove the quick coupler by pulling down on the colored sleeve (Yellow, Red, Green, Gray or Black) and the coupler will pop off the supply tube.

Then unthread the black end of the coupler from the hose, this should be hand tight Only, than pull the spring off.

- 2) From up on top grab the arm that swivels from sink to sink and pull straight up, this will take a firm pull to remove the arm. Once it pops off pull the hose up and out of the shank.

- 3) Now with the mounting shank exposed you can see the shank is cut on both side for a open end wrench you can use a 22mm or a adjustable wrench and turn the shank clockwise to firmly tighten down the faucet.

- 4) Once the faucet body is tightened down firmly the faucet can be reassembled, just reverse the order.
