

VARIO CONNECTOR SET - #0014220000

The centerline of the waste coming out the back of the Happy D #017009 and Starck 1 #023309 is **7 1/8"** (180mm) from the finished floor.

The vario connector set has **THREE 4"** diameter pipes: a straight pipe, a 90-degree bend pipe, and an offset pipe. Each of these pipes has a slip-fit gasket connection on one end. The slip fit connection allows the pipe to connect to the ceramic waste nipple on the back of the toilet, as well as for each pipe to be "daisy-chained" to another.

Different configurations of these three pipes can accommodate a certain range of floor and wall rough-ins. See toilet specs for exact measurements.

To connect the toilet to a wall rough-in, the straight pipe would be used. Using the straight pipe of the Vario (to connect from the toilet's waste to the wall) would require the waste on the wall to be mounted at about 7" from the finished floor.

Using the offset pipe in conjunction with the straight pipe allows for about a 1 inch offset. This means the waste on the wall could be mounted at approximately 6" from the finished floor, instead of 7".

The 90-degree bend pipe can be used alone OR with any combination of the other two pipes to achieve a variety of floor rough-ins. See toilet specs for exact measurements.

In order to connect these pipes to the stub out, a 4"-to-4" no-hub adapter (FERNCO coupling) connection must be used.
